DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Edward W. Goodman Reg. 28,613 on March 15, 2005.

In line 1 of claim 7 after the phrase "computer program" insert the phrase "contained in a program memory."

In line 1 of claim 8 after the phrase "computer program" insert the phrase "contained in a program memory."

Allowable Subject Matter

Claims 1-8 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or would not have rendered obvious a method of processing data contained in a digital input image formed by pixels, said method

Art Unit: 2623

comprising the steps of: calculating (ACT) a spatial activity value of a current pixel based on values (Y) of said current pixel and of pixels adjacent thereto, determining (NN17) a non-natural uniform area (NN) if the spatial activity value of various consecutive pixels is lower than a first predetermined threshold value, gradient filtering (GF) values (Y) of the pixels adapted to detect (THR1) strong edges (SE) inside the image, determining (RC) an artifact if the spatial activity value of a current pixel is higher than a second predetermined threshold value and is concentrated on said pixel, and detecting (10) a ringing artifact if the artifact coming from the artifact determination step (RC) lies between a non-natural uniform area (NN) and a strong edge which are close together.

The closest prior art, U.S. Patent 5,974,197 to Lee et al. discloses a method that generates an edge map in order to determine whether an area is a homogenous area or an area containing edges (column 1, lines 58-61). Adaptive filters are then applied according to edge location information. However Lee does not disclose determining a spatial activity measure. Lee also does not disclose a step for determining artifacts according to thresholds or determining the artifacts to be ringing artifacts depending on location. Lee therefore fails to anticipate or render obvious the claimed invention.

U.S. Patent 6,795,588 to Nio et al. discloses a method to deal with ringing noise by determining high frequency component of the image (column 9, lines 55-60) and determining edge and ringing noise edge detection using comparators and thresholds (column 10, line 65- column 11, line 10). However Nio does not disclose or fairly suggest calculating a spatial activity value based on area pixels. Nio also does not

Art Unit: 2623

disclose a gradient filtering step to determine edges. Therefore Nio, Lee or the combination of the two do not teach or fairly suggest the claimed invention.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
